

Opening Comfort

with Laser Easy Opening by LPF

LPF

A Clondalkin Company

FLEXIBLE PACKAGING

About us

LPF is part of the international Clondalkin Group, an international producer of high value added packaging products and services. Our focus on the requirements of our customers has led to several market leadership positions in Flexible- and Specialist Packaging.

As one of the 45 production companies, LPF Flexible Packaging specialises in high barrier packaging for Food-, Pharmaceutical- and Horticultural markets. Our customers benefit from the strong financial position of our Group, inhouse extrusion of CPP and PE and the security of contingency manufacturing.

Easy opening by Laser

LPF's high tech CO2 laser engraver uses computer technology and light radiation through a system of mirrors, to engrave an opening in a packaging laminate. The laser engraver partially removes the layer that gives strength to the material, while leaving the barrier properties intact. The engraving is in perfect register to the printing, offering excellent presentation and design. LPF supplies complete laser engraved reels that can be used on packing machinery like any other reel of packaging material. You do not need to make any adaptations to your packaging process!

Easy Opening adds value

No scissors, no teeth, no frustration. LPF's integrated Easy Opening by Laser makes sure that consumers can enjoy a product wherever they are. LPF can apply lasercuts in almost any size and shape such as corners, half circles or perforations. Integrated Easy Opening can be used on laminates for stand-up pouches, sachets and stickpacks.

It is a unique marketing tool for a range of products such as dehydrated foods, personal care products, pharmaceutical products and confectionery.
